Bulletin of MECHANICAL ENGINEERING EDUCATION

143

VOLUME 8

1969

EDITORS: **J. H. LAMBLE, J. PARKER, R. SOWERBY**

in collaboration with

Prof. W. JOHNSON

The University of Manchester Institute of Science & Technology

Supported by an International Board of Consulting Editors

U. of ILL. LIBRARY

Bulletin of MECHANICAL ENGINEERING EDUCATION

Joint Editors

J. H. LAMBLE, D.Sc. and J. PARKER, Ph.D.

Reviews Editor

R. SOWERBY, B.Sc. (Eng.), M.Sc. Tech.

in collaboration with Professor W. JOHNSON,

The University of Manchester Institute of Science & Technology

Consulting Editors

A. N. BLACK, The University, Southampton.
B. A. BOLEY, Columbia University, New York, U.S.A.
A. F. BURSTALL, The University of Newcastle-upon-Tyne.
W. CARNEGIE, The University of Surrey.
A. W. J. CHISHOLM, The University of Salford.
J. A. COLE, University of Western Australia, Australia.
B. CROSSLAND, Queen's University, Belfast, N.I.
F. R. E. CROSSLEY, University of Massachusetts, U.S.A.
J. P. DUNCAN, The University, Stanley Park, Vancouver, B.C., Canada.
W. N. FINDLEY, Brown University, Providence, R.I.
H. HAMPSON, Rob't. Gordon Technical College, Aberdeen,
D. W. HOLDER, The University of Oxford.
J. H. HORLOCK, The University of Cambridge.
J. G. JAGGER, The University of Bradford.
K. L. JOHNSON, The University of Cambridge.
D. S. MACLELLAN, The University of Leicester.
N. N. MALININ, Moscow Higher Technical Sc ol, imeni N.E. Bauman, U.S.S.R.
J. B. MANTLE, University of Saskatchewan, Regina Campus, Canada.
D. L. MORDELL, McGill University, Montreal, Canada.
E. W. PARKES, The University of Cambridge.
E. PESTEL, Technische Hochschule, Hanover, Germany
G. F. C. ROGERS, The University of Bristol.
M. C. SHAW, Carnegie Institute, Pittsburgh, Pa., U.S.A.
A. L. TITCHENER, University of Auckland, New Zealand.
S. A. TOBIAS, The University of Birmingham.
A. C. WALSHAW, The University of Aston in Birmingham.
A. H. WILLIS, University of New South Wales, Australia.

Publishing Office: Pergamon Press Limited, Headington Hill Hall, Oxford OX3 0BW England

Advertisement Manager: Maxwell House, 348/350 Gray's Inn Road, London W.C.1. (01–837 6484)

The publisher reserves the right to dispose of advertisement colour blocks after twelve months, monotone blocks after six months, with or without prior notification.

Annual Subscription Rates

For all institutional, industrial and government establishments, and educational establishments outside the British Commonwealth, £12 ($30).

For educational establishments within the British Commonwealth, £5 ($15).

For individuals, £2 ($6).

Subscription Orders preferably accompanied by a cheque, should be sent to the following addresses:

U.K., Europe, Africa and Asia: Pergamon Press Ltd., Attention Mr. B. Cox, Headington Hill Hall, Oxford, E

The Americas: Pergamon Press Inc., Attention Mr. R. Miranda, Maxwell House, Fairview Park, New York 10523, U.S.A.

Australasia: Pergamon Press Pty Ltd., 19A Boundary Street, Rushcutters' Bay, New South Wales 2011, A

INDEX

Volume 8

Issue numbers in bold figures, page numbers in light figures

ADLINGTON, J. E., Project work in mechanical engineering degree and diploma laboratory courses, **2,** 165.
Aim of laboratory teaching, The, W. G. WOOD, **2,** 115.
AKERS, A., A simple journal bearing demonstration, **3,** 207.
ARNOLD, J. B. and HUGHES, D. H., A scheme of laboratory work for H.N.D. and B.Sc. courses, **2,** 123.

BARNES, J. H., Project work—a training and assessment, **2,** 171.
BRIDE, W. L., Deflexion of a radially loaded ring, **4,** 333.

CADDELL, R. M. and LAMBLE, J. H., Some observations on the tensile testing of ductile metals, **3,** 227.
CADDELL, R. M. and SOWERBY, R., Strain hardening: an introduction to a fundamental experiment, **1,** 31.
CALLADINE, C. R., On the teaching of inelastic column theory, **3,** 239.
CHAPLEO, A. Q., Curve fitting by the method of least squares, **4,** 347.
Common misconception concerning the second law of thermodynamics, A, M. TRIBUS and R. B. EVANS, **1,** 51.
Conversion of engineering drawings into the metric system, G. R. SCHIFFER, **4,** 323.
COUSINS, J. E., Penetration by high velocity metallic jets, **1,** 45.
Curve fitting by the method of least squares, A. Q. CHAPLEO, **4,** 347.

D'Alembert's principle and inertia forces, J. H. SWANNELL, **1,** 71.
Deflexion of a radially loaded ring, W. L. BRIDE, **4,** 333.
Deformations of thin twisted open-section structural members, The, M. S. GREGORY, **1,** 75.
Design and construction of a small wind tunnel, D. C. STEVENSON, **1,** 11.
Dimensional analysis
  Direct demonstration of dimensional analysis, B. W. FIRTH, **1,** 65.
  Generalized dimensional analysis and similarity analyses, F. A. MORRISON, **4,** 289.
Direct demonstration of dimensional analysis, B. W. FIRTH, **1,** 65.
Editorial, **2,** 97.
Editorial, **3,** 193.
Electrical analogy of extended surfaces, An, J. R. SIMONSON, **3,** 215.
EMMERTON, J. T., The Greeks had a word for it, **3,** 195.
Empiricism of the rayleigh dissipation function, The, B. MORRILL, **4,** 301.
Ends and means in laboratory teaching, D. G. MARTIN, **2,** 185.
Engineering implications of the entropy of mixing, M. J. FRENCH, **4,** 315.
Engineering design
  An inductive approach to teaching creativity, J. C. PURCUPILE, **4,** 327.
Engineering drawing
  A new approach to the teaching of engineering drawing, R. THOMSON, **4,** 321.
  Conversion of engineering drawings into the metric system, G. R. SCHIFFER **4,** 323.
Errata, **4,** 384.
EVANS, R. B. and TRIBUS, M., A common misconception concerning the second law of thermodynamics, **1,** 51.
Ev[illegible] simpler tensor, An, M. S. GREGORY, **3,** 265.
Ex[illegible]iments in degree course laboratory work, N. LE S. FILLEUL, **2,** 133.

Exploring the surface geometry of deformed plates, M. S. GREGORY, **1,** 77.

FIELDING, B. J., A problem of mechanism synthesis, **3,** 211.
FILLEUL, N. LE S., Experiments in degree course laboratory work, **2,** 133.
FIRTH, B. W., Direct demonstration of dimensional analysis, **1,** 65.
Fluid Mechanics
A graph—nomograph method for locating shock waves in constant area ducts with friction, T. C. SCOTT and T. Y. NA, **4,** 307.
Formulation of equations in classical thermodynamics for "N" possibly reversible work modes, R. K. IREY, **1,** 55.
FRENCH, M. J., Engineering implications of the entropy of mixing, **4,** 315.

Generalized dimensional analysis and similarity analyses, F. A. MORRISON, **4,** 289.
Geometry of curved surfaces: the simplest tensor, The, M. S. GREGORY, **3,** 259.
GILLBE, T. N., Project planning, **2,** 179.
Graph—nomograph method for locating shock waves in constant area ducts with friction, A, T. C. SCOTT and T. Y. NA, **4,** 307.
Greeks had a word for it, The, J. T. EMMERTON, **3,** 195.
GREGORY, M. S., An even simpler tensor, **3,** 265.
GREGORY, M. S., An inexpensive high quality camera for in-plane strain analysis by the Moire reflex spectrographic method, **1,** 83.
GREGORY, M. S., Exploring the surface geometry of deformed plates, **1,** 77.
GREGORY, M. S., The deformations of thin twisted open section structural members, **1,** 75.
GREGORY, M. S., The geometry of curved surfaces: the simplest tensor, **3,** 259.
GREGORY, M. S., The shape of a twisted I-beam, **3,** 263.

Heat transfer
An electrical analogy of extended surfaces, J. R. SIMONSON, **3,** 215.
HUGHES, D. H. and ARNOLD, J. B., A scheme of laboratory work for H.N.D. and B.Sc. courses, **2,** 123.
HUMPHREYS, A. G., A plea for a standard sign convention in bending theory, **3,** 253.
HYKIN, D. W., Practical work in mechanical and production engineering courses, **2,** 103.

Inductive approach to teaching creativity, An, J. C. PURCUPILE, **4,** 327.
Inexpensive high quality camera for in-plane strain analysis by the Moire reflex spectrographic method, An, M. S. GREGORY, **1,** 83.
IREY, R. K., Formulation of equations in classical thermodynamics for "N" possibly reversible work modes, **1,** 55.

JOHNSON, W. and SOWERBY, R., Upper bound techniques applied to plane strain extrusion, minimum weight two-dimensional frames and rotationally symmetric flat plates, **3,** 269.

Laboratory work—aims and achievements, A. G. SMITH, **2,** 105.
Laboratory work—examine the evidence, J. C. MCVEIGH, **2,** 119.
Laboratory work in the Higher National Certificate in Engineering, J. PIDDUCK, **2,** 161.
Laboratory work (see also *Project work*)
A scheme of laboratory work for H.N.D. and B.Sc. courses, J. B. ARNOLD and D. H. HUGHES, **2,** 123.
Ends and means in laboratory teaching, D. G. MARTIN, **2,** 185.
Experiments in degree course laboratory work, N. LE S. FILLEUL, **2,** 133.
Laboratory work—aims and achievements, A. G. SMITH, **2,** 105.
Laboratory work—examine the evidence, J. C. MCVEIGH, **2,** 119.
Laboratory work in the Higher National Certificate in Engineering, J. PIDDUCK, **2,** 161.
Organization of laboratory work for a Higher National Diploma in Mechanical Engineering, D. L. M. PICKARD, **2,** 145.

Teaching and examining the H.N.C. engineering and measurements course, B. D. A. PHILLIPS, **2,** 149.
Teaching, examining and the place of practical work in the New Higher National Certificate in Engineering, F. J. WILLIAMS, **2,** 153.
The aim of laboratory teaching, W. G. WOOD, **2,** 115.
LAMBLE, J. H. and CADDELL, R. M., Some observations on the tensile testing of ductile metals, **3,** 227.
Library education for scientists and engineers, D. N. WOOD, **1,** 1.
Lubrication
A simple journal bearing demonstration, A. AKERS, **3,** 207.

MARTIN, D. G., Ends and means in laboratory teaching, **2,** 185.
MATHER, J., S.F. and B.M. diagrams for realistic beam systems, **4,** 331.
MCVEIGH, J. C., Laboratory work—examine. the evidence, **2,** 119.
MORRILL, B., The empiricism of the Rayleigh dissipation function, **4,** 301.
MORRISON, F. A., Generalized dimensional analysis and similarity analyses, **4,** 289.

NA, T. Y. and SCOTT, T. C., A graph-nomograph method for locating shock waves in constant area ducts with friction, **4,** 307.
New approach to the teaching of engineering drawing, A, R. THOMSON, **4,** 321.

On the free-free beam, C. POLI, **4,** 341.
On the teaching of inelastic column theory, C. R. CALLADINE, **3,** 239.
Organization of laboratory work for a Higher National Diploma in Mechanical Engineering, D. L. M. PICKARD, **2,** 145.
ORMEROD, A., Some features of the Mohr circle diagram for three dimensional stress, **1,** 23.

Penetration by high velocity metallic jets, J. E. COUSINS, **1,** 45.
PHILLIPS, B. D. A., Teaching and examining the H.N.C. engineering and measurements course, **2,** 149.
PICKARD, D. L. M., Organization of laboratory work for a Higher National Diploma in Mechanical Engineering, **2,** 145.
PIDDUCK, J., Laboratory work in the Higher National Certificate in Engineering, **2,** 161.
Plasticity
Strain hardening: an introduction to a fundamental experiment, R. M. CADDELL and R. SOWERBY, **1,** 31.
Upper bound techniques applied to plane strain extrusion, minimum weight two-dimensional frames and rotationally symmetric flat plates, R. SOWERBY and W. JOHNSON, **3,** 269.
Plea for a standard sign convention in bending theory, A, A. G. HUMPHREYS, **3,** 253.
POLI, C., On the free-free beam, **4,** 341.
Practical work in mechanical and production engineering courses, D. W. HYKIN, **2,** 103.
Problem of mechanism synthesis, A, B. J. FIELDING, **3,** 211.
Project planning, T. N. GILLBE, **2,** 179.
Project work—a training and assessment, J. H. BARNES, **2,** 171.
Project work in mechanical engineering degree and diploma laboratory courses, J. E. ADLINGTON, **2,** 165.
Project work (see also *Laboratory work*)
Practical work in mechanical and production engineering courses, D. W. HYKIN, **2,** 103.
Project planning, T. N. GILLBE, **2,** 179.
Project work—a training and assessment, J. H. BARNES, **2,** 171.
Project work in mechanical engineering degree and diploma laboratory courses, J. E. ADLINGTON, **2,** 165.
PURCUPILE, J. C., An inductive approach to teaching creativity, **4,** 327.

Scheme of laboratory work for H.N.D. and B.Sc. courses, A, J. B. ARNOLD and D. H. HUGHES, **2,** 123.
SCHIFFER, G. R., Conversion of engineering drawings into the metric system, **4,** 323.
SCOTT, T. C. and NA, T. Y., A graph-nomograph method for locating shock waves in constant area ducts with friction, **4,** 307.
S.F. and B.M. diagrams for realistic beam systems, J. MATHER, **4,** 331.
Shape of a twisted I-beam, The, M. S. GREGORY, **3,** 263.
SIMONSON, J. R., An electrical analogy of extended surfaces, **3,** 215.
Simple journal bearing demonstration, A, A. AKERS, **3,** 207.
SMITH, A. G., Laboratory work—aims and achievements, **2,** 105.
Some features of the Mohr circle diagram for three dimensional stress, A. OMEROD, **1,** 23.
Some observations on the tensile testing of ductile metals, R. M. CADDELL and J. H. LAMBLE, **3,** 227.
SOWERBY, R. and CADDELL, R. M., Strain hardening: an introduction to a fundamental experiment, **1,** 31.
SOWERBY, R. and JOHNSON, W., Upper bound techniques applied to plane strain extrusion, minimum weight two-dimensional frames and rotationally symmetric flat plates, **3,** 269.
Standardization of examination marks, The, J. H. SWANNELL, **4,** 351.
STEVENSON, D. C., Design and construction of a small wind tunnel, **1,** 11.
Strain hardening: an introduction to a fundamental experiment, R. SOWERBY and R. M. CADDELL, **1,** 31.
SWANNELL, J. H., D'Alembert's principle and inertia forces, **1,** 71.
SWANNELL, J. H., The standardization of examination marks, **4,** 351.
Teaching and examining the H.N.C. engineering and measurements course, B. D. A. PHILLIPS, **2,** 149.
Teaching, examining and the place of practical work in the New Higher National Certificate in Engineering, F. J. WILLIAMS, **2,** 153.
Thermodynamics
A common misconception concerning the second law of thermodynamics, M. TRIBUS and R. B. EVANS, **1,** 51.
Engineering implications of the entropy of mixing, M. J. FRENCH, **4,** 315.
Formulation of equations in classical thermodynamics for "N" possibly reversible work modes, R. K. IREY, **1,** 55.
THOMSON, R., A new approach to the teaching of engineering drawing, **4,** 321.
TRIBUS, M. and EVANS, R. B., A common misconception concerning the second law of thermodynamics, **1,** 51.

Upper bound techniques applied to plain strain extrusion, minimum weight two-dimensional frames and rotationally symmetric flat plates, W. JOHNSON and R. SOWERBY, **3,** 269.

WILLIAMS, F. J., Teaching, examining and the place of practical work in the new Higher National Certificate in Engineering, **2,** 153.
WOOD, D. N., Library education for scientist and engineers, **1,** 1.
WOOD, W. G., The aim of laboratory teaching, **2,** 115.

Aims and Scope

(a) For the publication of articles about new experimental methods and new experimental demonstrations which are of fundamental value to Mechanical Engineering students at less than graduate level.

(b) To discuss the construction of apparatus for specific tests and demonstrations of value in education.

(c) To carry discussions concerning teaching methods and aids—e.g. the use of films and models—and to advertise the coming of new ones as these become available.

(d) To discuss what new subjects can, or should be, introduced into mechanical engineering syllabuses, with suggestions as to methods of approach, giving sources of material for use in the preparation of lectures.

(e) To review books, primarily with use by students in view, and to draw attention to particular papers which will have a value in the education of all engineers.

Notes to Contributors

1. The Editors will be pleased to receive contributions from all parts of the world on matters coming within the purposes of the *Bulletin*. Manuscripts for publication should be addressed to the Editors at the Department of Mechanical Engineering, U.M.I.S.T., P.O. Box No. 88, Sackville Street, Manchester, M60 1QD.

2. Only articles not previously published will be accepted and authors must agree not to publish elsewhere an article submitted to and accepted for the *Bulletin*.

3. Letters to the Editor may include:
   (a) Criticisms of articles recently published in the *Bulletin*.
   (b) Comments on current Engineering Educational matters of academic and technical interest.

4. All contributions must be in English, the Editors at their discretion will modify style should this be necessary.

5. Manuscripts should be typed with *double spacing* on one side of the paper with ample margins and submitted in duplicate. Pages should be numbered consecutively.

6. The title of the article, the author's name and the address from which the article comes should appear at the head of the article. In the case of joint authors, it must be made clear to which of them correspondence and proofs are to be forwarded.

7. The essential contents of each article should be recapitulated in a brief summary.

8. Drawings, etc., should be in ink, about twice the final size required with the lettering clear, "open" and sufficiently large to permit the necessary reduction of size in block-making. Line drawings should include all relevant detail. Dye-line prints should not be sent.

Half-tone illustrations are to be restricted to the *minimum* necessary, they should accompany the script but must not be included on manuscript pages. Photographs should be enlarged sufficiently to permit clear reproduction, and if words or numbers are to appear on a photograph, two prints should be sent, the lettering being indicated clearly on one print only.

9. References in the text to published literature should be given by numbers in square brackets on the line and these references should be listed together at the end of the article in the order in which they occur in the text. *Double spacing must be used throughout.*

Journal references should be arranged thus:

[1] J. F. Dooley and S. S. Gill, *Bull. mech. Engng Educ.* **2**, 41 (1963).

Book references to be given as follows:

[2] J. H. Lamble, *Principles and Practice of Non-destructive Testing*, p. 41. Heywood, London (1962).

10. Nomenclature should conform to that most frequently used in the engineering field concerned and, in particular, reference should be made to B.S.1991: 1960 for units and abbreviations.

11. All Greek letters and unusual symbols should be identified by name, in the margin, the first time they are used.

12. Tables should be numbered consecutively and should not repeat data available elsewhere in the article.

13. Captions for figures should be typed on a *separate sheet* and placed at the end of the manuscript.

14. No manuscripts or illustrations accepted for publication will be returned unless a specific request for this to be done is received with the manuscripts.

15. Fifty reprints of each article will be sent to the *author* free of charge. Additional copies can be purchased if specified on the reprint order form which will accompany proofs. *Reviewers* will receive one copy of their reviews. *Publishers* will receive two copies of the review.

16. The *Bulletin* will be published quarterly.

Conditions for reproducing material from Pergamon Press Publications:

All editorial material appearing in Pergamon Press publications is covered by copyright, except where otherwise stated. We normally agree however to the reproduction, free of charge, of all articles which appear in Pergamon publications provided prior permission has been sought. Moreover, we are prepared to produce quantities or prints of contributions which we have published at a small charge to cover printing and/or reproduction costs. The information is given in the light of the frequent enquiries received on this point from organisations and individuals.
